

SAFEGUARDING THE DATA OF THOUSANDS OF CLIENTS FOR GALES SOLICITORS

ABOUT GALES

Gales are a regional legal firm specialising in a range of legal services for both businesses and individuals. They have over 70 years of experience and 1000's of happy clients. Their high standing and reputation is of great importance to them.

THEIR SITUATION

As a law firm Gales handles highly confidential client information and considerable sums of client funds every year. They need to be sure that the data and the funds are secure, and to do this they need to make sure that they are protected from malicious bots looking to compromise their security. Phishing attacks are particularly prevalent in the legal sector and assurance against the vulnerabilities presented by such phishing attacks was important.

RESULTS

Gales implemented the Veracity Web Threat Solution to counter the menace of malicious bots. The Web Threat Protection solution **blocked 52.5%** of traffic to their website that was identified as malicious bots. This has reduced the threat to them significantly, giving them peace of mind over both data security and funds security.

"Dealing with Veracity was great and easy to set up. Running a small firm and having time to do everything is challenging so it being easy to set up is essential."

Matthew Moore, Senior Partner.

"I try not to think about cyber-attacks too much due to how catastrophic it can be, but with Veracity in place I feel a lot more comfortable. I was not surprised as I have read enough about it generally, so I assumed there were some bots, but I had no idea the level of bots Veracity found.

I feel a lot more secure in our business, reputation, and the website in general since having Veracity's Web Threat Protection in place."

Matthew Moore,
Senior Partner at Gales Solicitors
