

PREVENTING MALICIOUS TARGETED ATTACKS FOR LANGHAM PARTNERSHIP

ABOUT LANGHAM

Langham Partnership exists to see churches in the Majority World equipped for mission and grow to maturity in Christ.

Langham Partnership comes alongside leaders in growing Christian communities in the Majority World with resources, pastoral training, and theological education to disciple their communities. Langham has pastor training movements in countries worldwide led by local leaders who understand the context and challenges facing the local church.

RESULTS

Over 28 days, Veracity stopped **369 potential attacks** across their websites.

Veracity Trust Network's Web Threat Protection has **identified and stopped 20.9% of web traffic identified as Malicious Bots** looking for vulnerabilities and potential attack points to Langham's Website.

Simon Foulds, Support Development Manager at Langham stated "We feel much more safe knowing Veracity is keeping malicious activity from our website. There have been a few times now when we can see a spike in our web traffic and they were probably attacks, which were stopped. Veracity Trust Network is a great team to work with."

"The set-up was easy for me, a small bit of script onto our website and it was done. Now we speak or email each month and check in to see how traffic is and if there is anything we can do to support each other on the site."

Simon Foulds, Support Development Manager at Langham Partnership

"We weren't aware we had bots on our site. From a marketing perspective, it's now really good to know when we look at Google Analytics who are real people and who are bots."

Simon Foulds, Support Development Manager at Langham Partnership
