Web Threat Protection

Veracity Trust Network

Bot detection solutions that protect your websites from automated attacks. Safeguarding your online revenue, competitive edge, and brand reputation by addressing security and fraud challenges to minimise vulnerabilities, prevent loss, and ensure an efficient customer experience.

What are the threats?

It's extremely likely that automated bots are generating over 50% of the traffic to your website. While some bots are legitimate, such as search engine crawlers, most of this automated traffic comes from malicious bots that continue to increase and evolve.

> " Veracity has the potential to be such a valuable piece of technology for our business. This is a missing cornerstone of our product.
